Thank you for your order for KIRK© or Castell© duplicate, replacement, or master keys.
We acknowledge your request and want to ensure you are aware of the potential danger that introducing these keys into your trapped key interlock system can create.

- Trapped key interlock systems control risk through a strictly defined set of sequential safety procedures with a limited number of keys uniquely coded to that specific system. If the system is compromised through the introduction of duplicate, replacement, or master keys, the consequence could cause serious or fatal injury to persons or damage to processes and equipment. Such keys as mentioned could expose personnel to hazards which the trapped key interlock system is designed to protect against.

- KIRK© understands that as an end user, you may have the need for duplicate, replacement, or master keys, however, we have no way of evaluating this need for the potential hazards it may create when introduced into the interlock system.

- Duplicate and master keys should be controlled by company management and kept in a secure location to be issued into service only upon approval by said management and documented when put into service.

By signing this release form, you agree to Defend, Indemnify and Hold Harmless Kirk Key Interlock LLC and Castell Safety International from all claims, demands, lawsuits, including attorney's fees and costs incurred in defending the same, arising from any actual or alleged use of any duplicate, replacement, or master keys supplied by Kirk Key Interlock LLC to you, that allegedly results in any death or injury to any person or damage to any property, or loss of use thereof, irrespective of whether it is alleged that Kirk Key Interlock LLC or Castell Safety International was negligent in supplying such duplicate, replacement, or master keys.
